

ICAM-540 Industrial Al Camera User Cases

Chun-Yu Chen (陳俊佑), Edge Al Senior Solution Engineer, Advantech 2025.04.10

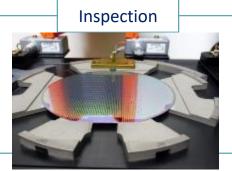

Vision Al Applications In Manufacturing

Application Field

Automotive

Semiconductor

Food and Beverage

Machine Tool

Warehouse

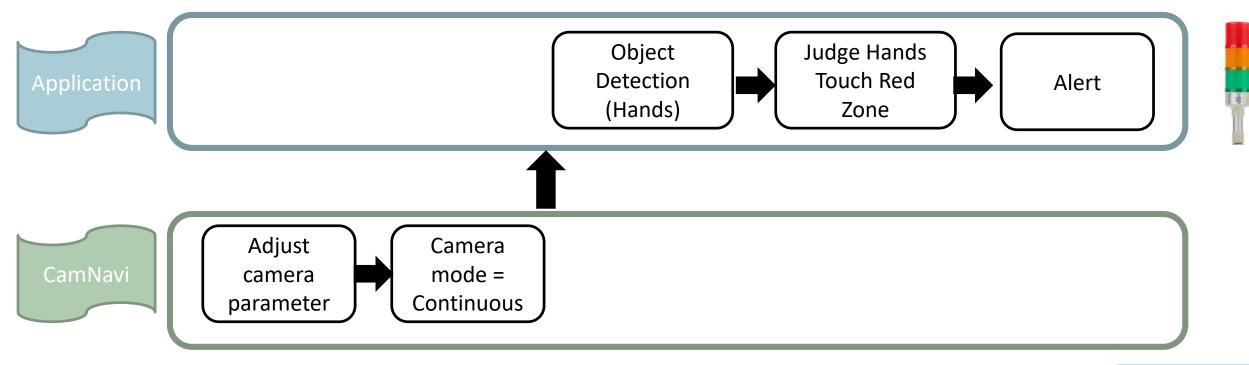

Case 1 – Electronic Fence

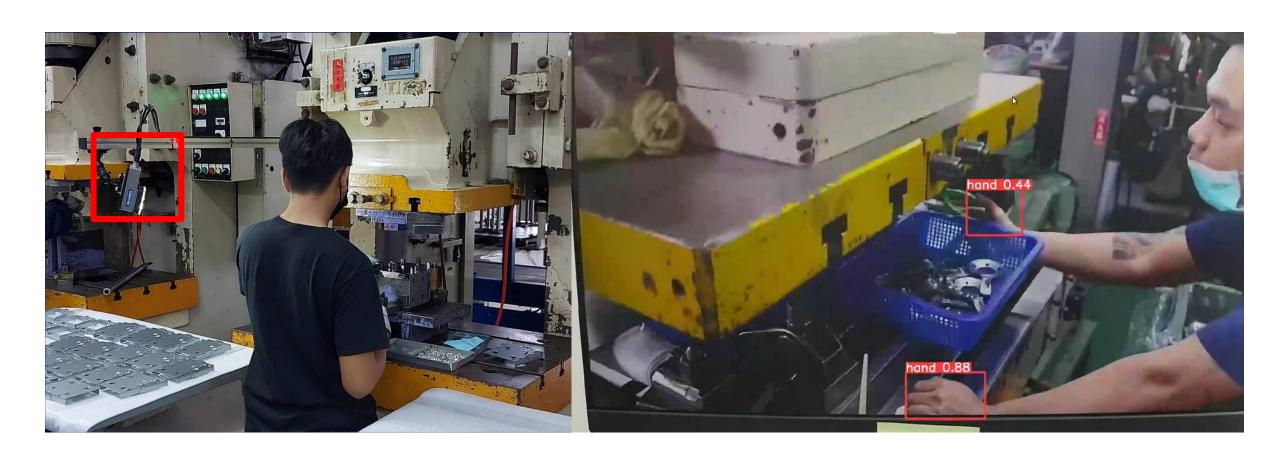

User Background: A mechanism vendor in Taiwan.

User Scenario: Prevent hands reach red zone area while operating [Stamping Press machine].

Case 1 – Electronic Fence

Case 2 – OV20i, Al Vision System

User Background: OV20i, developed by Overview in US.

User Scenario: Solve inspection tasks in minutes without writing a line of code.

Smart Alignment

Finds and aligns parts accurately reducing the need for fixtures and lighting.

Al Inspection Algorithms

Presence/absence, Quality grading, Assembly verification, Defect detection and classification.

I/O and Logic Builder

Control the onboard I/O with flexible drag-and-drop logic. Use Node-red to easily connect external systems.

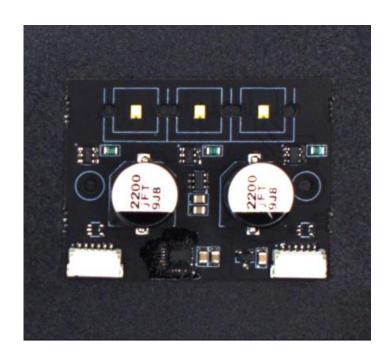

Case 2 – OV20i, Application

Reliable Assembly Verification

With ease using Overview's Al Classifier.

Quickly train and identify missing parts, incorrect assemblies, and anomalous defects, and more.

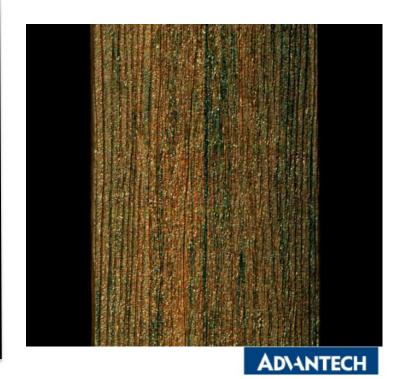

Powerful surface defect detectionWith OV20i's Defect Detection tool.

As few as 5 samples, the OV20i accurately finds and categorizes defects beyond just pass/fail.

Continuous process inspection

Continuous manufacturing applications including flooring, textiles, are easy with the OV20i's high speed onboard GPU

Case 3 – OCR (Optical Char Recognition)

User Background: System Integrate partner in Taiwan.

User Scenario: Read the text in image for product traceability or check expiration date.
